

NAME

searchd – SWISH++ search daemon monitor start/stop script

SYNOPSIS

searchd { **start** | **stop** | **restart** }

DESCRIPTION

searchd is a System V start/stop script for **searchmonitor**(8). To be called automatically upon entering (and exiting) a given run level (for example, the default run level upon system boot), the script must be placed in that run level's script directory.

For example, these symbolic links:

```
/etc/rc3.d/S99searchd -> ../init.d/searchd
/etc/rc3.d/K99searchd -> ../init.d/searchd
```

will cause **searchd** to be called automatically upon entering (and exiting) run level 3. (The directories above may vary on different systems.)

FILES

/etc/init.d	Customary directory for start/stop scripts
swish++.conf	default configuration file
/usr/local/bin/search	Default location for search (1)

SEE ALSO

search(1), **swish++.conf**(4), **init**(8), **searchmonitor**(8)
